## Post All Mootool Template Issues Here

Posted by papokergod - 2008/02/07 21:32

---

I am going to be working on the mootools/Jquery issues. I need everyone with conflicts to post up their website address along with what issues you have. Including all fireboard core features and numinu issues.

Thanks.

EDIT:

Also include which template (RT/YT) you have issues with

EDIT 2:

Also which version of Joomla (1.0.x 1.5 etc)

---

## Re:Post All Mootool Template Issues Here

Posted by herdboy - 2008/02/07 21:42

---

Hi

I am using a YT template over at this site [http://www.herdboy.com/index.php?option=com\\_fireboard&Itemid=105](http://www.herdboy.com/index.php?option=com_fireboard&Itemid=105)

I am having a problem with the templates moo effects that are disabled either by the template or by fireboard. The conflicts occur with the default templates as well. You will notice that the top panel works fine on all pages except the FB page. The errors are different when using the default template and the numinu template.

Thanks for your assistance

Edit

My issues are with all the YT templates unfortunately.

Edit 2

On sites running Joomla 1.0.X and Joomla 1.5.0

this should take care of your menu effects problems, it did on my test server with the same template.

[http://www.bestofjoomla.com/component/option,com\\_fireboard/Itemid,38/func,view/id,42943/catid,73/limit,10/limitstart,10/#42958](http://www.bestofjoomla.com/component/option,com_fireboard/Itemid,38/func,view/id,42943/catid,73/limit,10/limitstart,10/#42958)

## Re:Post All Mootool Template Issues Here

Posted by spike00 - 2008/02/10 20:49

---

First, my issue (by Firebug):

```
($B ) || document).getElementsBySelector is not a function
$ES("div.topbox", undefined)mootools.js.php (line 131)
e("div.topbox div", 0, 40)template.js.php (line 9)
setDivHeight()template.js.php (line 79)
start()template.js.php (line 23)
}function $ES(A,B ){return($B )||document).getElementsBySelector(A);}$.shared={r...
```

Template: Page by Yootheme

Joomla version: 1.5 Stable

---

I read here in the forum to try changing the loading order of js files.

Followed the (usually solving) hint and just changed the error. In that case it was something like jquery is undefined (around line 10 / 12 of ... damn do not remember the file...)

Second: I wrote a message on joomla.org forum about mootools and jquery conflicts. Since many conflicts are due to the sharing of the namespace (between mootools and jquery) and jquery provides an easy way (well, at least 3 ways) to solve this issue, I would like to know if Fireboard follows the guidelines by jquery to avoid namespace conflict.

All details here: [http://docs.jquery.com/Using\\_jQuery\\_with\\_Other\\_Libraries](http://docs.jquery.com/Using_jQuery_with_Other_Libraries)

Thanks

Problem with Joomla 1.5 / Fireboard 1.0.4 with template JA\_Corona ... top menu using mootool doesn't work. Error on fireboard page.

---

## Re:Post All Mootool Template Issues Here

Posted by chaosknign - 2008/03/14 13:26

Step 1:

Open fireboard.php (located in your /components/com\_fireboard folder).

Scroll down to or around line 141:

```
// Add required header tags
$mainframe->addCustomHeadTag("");
$mainframe->addCustomHeadTag('
//1: show, 0 : hide
jr_expandImg_url = " . JB_URLIMAGESPATH . "');
```

And comment out the \$mainframe->addCustomHeadTag call.

---

```
// Add required header tags
// $mainframe->addCustomHeadTag("");
$mainframe->addCustomHeadTag('
//1: show, 0 : hide
jr_expandImg_url = "" . JB_URLIMAGESPATH . ""');
```

Step 2:

Open your templates' index.php file (located in your templates/whatever\_template/ folder).

Find your opening tag somewhere. This is taken from yoo\_page:

```
" lang="language; ?>" dir="direction; ?>" >
```

You must insert the following code:

RIGHT after the opening tag... before ANY other command, so that it looks kinda like so:

```
" lang="language; ?>" dir="direction; ?>" >
```

What this is doing is inserting the JQuery library BEFORE the mootools library if the page requested invokes com\_fireboard. Loading up JQuery before mootools avoids the conflicts as long as it's 1.2.1 or above. Download the latest JQuery library just in case. I got me 1.2.3 packed and gzipped and replaced the one that comes with Fireboard (29kb!=happiness!)

I hope that helps guys!

Cheers!

K-9

P.S. I know the code doesn't show up. There's a link up there somewhere pointing to a thread with the code in a text file. Just insert that code right after the tag, before any other code and you're golden.

Actually, I eventually found the solution here.

Seems to be a common RocketTheme issue.

---

---

## Re:Post All Mootool Template Issues Here

Posted by MoonHawk - 2008/04/24 13:37

---

Not sure if this is anywhere else on the forum but there is a very very easy solution which has worked for me integrate MooTools and FireBoard on my template. Although it is my own template and not by Rockettheme / Yoothemes.

After both libraries have loaded (I have mine just before ) insert :

```
jQuery.noConflict();
```

The conflict is caused by variable conflicts between the libraries and the use of '\$'. The above forces jQuery to not use the \$ and resolves the conflict.

For more detailed and other variations you can refer to [http://docs.jquery.com/Using\\_jQuery\\_with\\_Other\\_Libraries](http://docs.jquery.com/Using_jQuery_with_Other_Libraries)

I hope this is helpful.

Best Wishes  
MoonHawk

Moonhawk,

Thanks for providing your solution to this. Im having a similar problem with a joomlart-corona template- joomla 1.5.

I would like to try your fix, since I havent had any other successes so far. Im just not sure where you mean for the jquery script to go? In the site template- index.php or within fireboard somewhere?

Thanks in advance!

Hi funkmanusa

The code goes in the area after you call the two scripts. You can also put a PHP around it to only show when in the FireBoard forum. Something like:

```
jQuery.noConflict();
```

Since I gave this tip I have download the latest version MooTools myself and use it instead of the default one that comes with J1.5 and it seems to have no conflict (as far as the scripts which I use are concerned anyway). I have also just released a Plugin (still in beta) which can be used to suppress the default MooTools library that Joomla! installs and use another one in it's place. You can also do this for specific page actions or user groups.

I forgot to include Fireboard as a page option, so I will get on that today and do an update of the Plugin which you could download from my site if you wish to try it. My site is [www.moonhawk.me.uk](http://www.moonhawk.me.uk).

I hope that helps.

Best Wishes  
MoonHawk

Thanks for this one MoonHawk. I was about to give up on Fireboard and use the Rok-PHPBB bridge, which meant I would also have had to leave out Groupjive as I am using it in conjunction with FB to create private group boards. This fix worked like a dream!!! :woohoo:  
Thanks again.

Cheers  
Dave

## Re:Post All Mootool Template Issues Here

Posted by azhhael - 2008/06/08 01:26

---

Guys... i wrote this post some time before:

[http://www.bestofjoomla.com/component/option,com\\_fireboard/Itemid,38/func,view/id,51723/catid,77/](http://www.bestofjoomla.com/component/option,com_fireboard/Itemid,38/func,view/id,51723/catid,77/)

so... with the answer i got until now, i decided to test EVERYTHING... every modification in the files for avoiding the Mootools and JQuery conflicts...

so i found the your posts...

After i added the fixes you told in you posts here... i had some errors changed in IE and i got again the switch height control of my website when using FB... so from this ones:

i have exactly this in my test joomla machine:

- 1 - joomla 1.5.3
- 2 - joomfish 2.0
- 3 - Fireboard 1.0.4
- 4 - mootools 1.11 in the YooMee Template

i don't know what version of JQuery library i have...:blush: i don't know where and how to look for this info...

here are the problems:

1 - i just installed FB forum... when i open it i already get this errors:

a - in IE7 i have the following error message:

Line: 109

Character:3

Error: O Objeto nÃ£o dÃ¡ suporte para a propriedade ou mÃ©todo

(in eng: the object gives no suport to the propriety or method)

URL: ...index.php?option=com\_fireboard&Itemid=149&lang=en

b - when i try to read the Sample Post it doesn't open nothing, stay in the same page with no posts to read

2 - when i try to login to test if i can post a new thread i get

a - the same IE error

b - the login redirects not to the forum but to the Home page

c - in the top of the FB template i get this error:

`_PROBLEM_CREATING_PROFILE`

d - in the Edit Profile area i get just this errors in the text:

- `_EDIT_TITLE` and `_YOUR_NAME` and `_EMAIL` and `_PASS` and `_VPASS`

e - the principal problems is that: I CAN'T POST NEW THREADS!!

please..... help ... there is no button for new thread...

f - when i try to read the Sample Post it doesn't open nothing, stay in the same page with no posts to read

g - when i try to use the Width switcher in the website template with FB in the page, i just get this error in IE so it doesn't work (but it works fine for any other page i open in the same template):

`javascript:void(0)`

3 - i tried to replace the file for FB 1.1.0 Aplha trying to solve these issues, but i got nothing solved and i got more problem cause a lot of images desapeared with a red X in the place and when i click in the blue folders icons i got a weird error so i uninstalled FB 1.1.0 and reinstalled 1.0.4 and now i am waiting for you help cause i have a big faith you'll help me.

NOW I HAVE THIS ISSUES:

1 - in FB now:

a - in IE7 i have the following error message: :dry:

Line: 12

Character:1

Error: JQuery nÃ£o estÃ¡ definido (in english: JQuery it's not defined)

Code: 0

URL: ...index.php?option=com\_fireboard&Itemid=149&lang=en

b - when i try to read the Sample Post it doesn't open nothing, stay in the same page with no posts to read:(

2 - when i try to login to test if i can post a new thread i get:

a - the same IE error as before in line 12:(

b - the login redirects not to the forum but to the Home page (i think it's normal, right?):)

c - in the top of the FB template i get this error: :(

d - in the Edit Profile area i get just this errors in the text::(

- \_EDIT\_TITLE and \_YOUR\_NAME and \_EMAIL and \_PASS and \_VPASS

e - the principal problems is that: I CAN'T POST NEW THREADS!! :(

f - when i try to read the Sample Post it doesn't open nothing, stay in the same page with no posts to read:(

g - when i try to use the Width switcher in the website template with FB in the page, THIS WORKS NOW!!!!!!!!!!!!!!)

SO.....

can you help me? i believe the problem seems to have something linked to the language...  
you said before something about look for

```
lang="language ?>" dir="direction ?>" >
```

that we'd need to edit or add something near it in index.php but the code was not there...i looked for th html.html you said could have the code, but this html just gave me a head code that has nothing about lang or dir .... so i didn't understand about this part of the changes... maybe if you explain it again better and put the correct code here i can solve my problems definitively...

can you help me???:blush:

## Re:Post All Mootool Template Issues Here

Posted by azhhael - 2008/06/16 19:26

Guys i just came to teel you what happened in my website. For the moment i try to solve the issue in another way cause i found the problem cause in another place that it's not Mootools conflict.

I came to say i reinstalled a new joomla 1.5.3 and installed the Fireboard 1.0.4 and it worked perfectly... so everytime i installed a new component i looked for a new issue in fireboard... i saw it's not a conflict with Mootools and JQuery BUT a conflict with Joomfish 2.0.

Fot Joomla 1.5 the JoomFish 2.0 it's the one that works on, but it has a conflict with Fireboard. I tried to update Fireboard to 1.1.0 alpha, but it didn't solve the conflict.

When you install the Joomfish the Fireboard get Profiles errors and stops to open the forum options for posting threads and read posts and etc... it just stops to work.

I don't understand why it happens, as i am not a developer in PHP and nothing, just a common user.

Can somebody try this at home and see if you get a solution for this issue?

To reproduce the issue it's simple, just install a new copy of Joomla 1.5.3 and install Fireboard 1.0.4 and Joomfish 2.0...

I know Joomla 1.5.3 is eng\_GB and i can imagine the other components as fireboard is in eng\_US, could it be the problem? I have no idea....

I just could detect that wneh you have the Joomffish Abstraction Layer Plugin disabled (or better... the Joomfish doesn't works on) the Firebord works perfectly... even with Joomfish installed, but when you Enable the Joomfish Abstraction Layer Plugin (or better... the Joomfish it's working on) the Fireborad stops to work.

So try to read a post of the sample data of Fireboard, or try to access the User Profile and you'll see what i say...

Thank you all, i'll be waiting and expecting you can find a solution because i need to put fireboard working in the same website with Joomfish caus i need 2 languages working at the same time.

:)

---

## Re:Post All Mootool Template Issues Here

Posted by azhhael - 2008/06/16 20:02

Guys, i found a solution:

here it is:

in the file `\plugins\system\jfdatabase\jfdatabase_inherit.php`

go to the line 563 and just after the `}` and before the other `}` paste and save this code:

---

return \$object;

the function will look like this:

```
function loadObject( &$object, $translate=true, $language=null )
```

```
{
  if (!is_null($object) && is_object($object)){
    $res = parent::loadObject($translate, $language);
    foreach (get_object_vars($res) as $key=>$val) {
      $object->$key = $val;
    }
  }
  else {
    $object = parent::loadObject($translate, $language);
  }
  return $object;
}
```

SO IT WILL WORK!!!!!!!!!!!!

hello

I am running j1.5.5 with fb 1.0.5 on the ja\_barite joomla template and I get what seems to be this mootools/jquery pb. I've tried the no conflict thing, the commenting trick but... whatever, I still get the same error message

---

=====

## Re:Post All Mootool Template Issues Here

Posted by micsj - 2008/09/06 22:51

---

I have Joomla 1.5.6., Fireboard 1.0.5. RC1, and YooTheme Evolution template.  
I changed these things:

1. in fireboard.php comment out line 166 like here:

```
// Add required header tags
```

```
/*$mainframe->addCustomHeadTag(" ");*/
```

```
$mainframe->addCustomHeadTag('
```

2. in the templates index.php insert this code after tag:

this should look like this:

3. download the latest JQuery pack, name it to jquery-latest.pack.js, and copy it to fireboard/template/default/js directory, and overwrite the foreboards jqery-latest.pack.js.

This worked for me.

=====

## Re:Post All Mootool Template Issues Here

Posted by rjdjohnston - 2008/12/10 02:30

---

I've tried implimenting all the mentioned fixes, in multiple combinations, at every turn either new errors occur or something like:

```
-----  
Message: Object doesn't support this property or method  
Line: 1  
Char: 1
```

---

Code: 0

URI: [http://92.65.62.41:8020/components/com\\_fireboard/template/default\\_ex/plugin/jtip/demo.js](http://92.65.62.41:8020/components/com_fireboard/template/default_ex/plugin/jtip/demo.js)

-----

This occurs after commenting out the default fireboard header Jquery include and adding the conditional jquery to template index.

Any thoughts?

Thanks.
