
Resize [img] linked images

Posted by zuze - 2008/07/03 19:25

I have users linking huge images with tags that distort the threads.
I have tried to change tags by adding the following sizing

but nothing changes..
Anyone has any suggestions why?
see attached image for tags...

Re:Resize [img] linked images

Posted by zuze - 2008/07/03 19:38

here are the tags I use <http://fireboard.bestofjoomla.com/images/fbfiles/images/tags.jpg>

This image that is posted above, it is linked with img tags from outside server, width 768pix. Here it is resized to 450pix wide automatically.
Can anyone have any idea what could cause image not to be resized?

Fireboard 1.0.4 do not recognize the size tag due of a bug... it is fixed in version 1.0.5

Re:Resize [img] linked images

Posted by zuze - 2008/07/04 03:09

Thank you for your answer!!!
Is 1.0.5 available for download? / when it will be?

Re:Resize [img] linked images

Posted by racoon - 2008/07/04 03:13

it is a prealpha version and you can find it in this thread:

Re:Resize [img] linked images

Posted by zuze - 2008/07/04 03:16

It must be a special access thread, I do not have access to it.

Any idea when to expect version 1.0.5 ?

ooops, sorry... it was the wrong link, I changed it

Re:Resize [img] linked images

Posted by zuze - 2008/07/06 18:12

Since Best of Joomla FB forums do resize the images, does that mean that these forums run on 1.0.5 version ?

*I am not sure why text posted double, when I have it typed only once?

Hmm I did get this solved in this thread.. here is the LINKY

viet4777 provides the file as well. What I like about his solution is that in your FB backend, you can set what your parameters are for images. I set mine to 500 x 500 and bam all these humongouse images they were linking were reduced proportionally in the threads. It does not fix old linked images, just the images that are linked or uploaded after you have either ftp'd or edited this file. Just read the thread at that linky and it will make sense..

Good luck!

Thank you

The file to change is

You can look at the file `interpreter.fireboard.inc.php` to find out the code. Find word 'img'.

You should give the max width at backend for Fireboard configuration.

I tested with IE (>=6.x) and FF.

Demo:

i think it is about `smile.class.php`

when it turns `[img...` to
